

**AMENDMENTS TO THE SPECIFICATION**

Page 1, delete the former title and change the title to the following:

**-- METHOD OF LINING A SURFACE WITH A GEOSYNTHETIC CLAY LINER --**

Page 1, after the title, insert the following title and paragraph:

**-- CROSS-REFERENCE TO RELATED APPLICATION**

This application is a continuation of application serial No. 10/056,850 filed January 24, 2002. --

Please replace paragraph [0024] with the following amended paragraph:

-- A chassis 42 supports the cradle rollers 24, 25 via their respective axles 43o, 44o. The chassis can slide left and right under hydraulic power on a base 43. The base 43 hitches to a tractor in a known manner such as a three-point hitch (not shown). Since the cradle rollers 24, 25 are powered, the roll 13 can be unfurled without the necessity of standing workmen on the trailing end 40. Also in a sudden rainstorm a partially unfurled roll can be rewound and covered to protect it from the rain. Most GCL rolls specify unfurling in a dry environment. --
